#### GENERATE THREE ADDRESS CODES

#### AIM:

To generate three address code using C program.

## **ALGORITHM:**

- Get address code sequence.
- Determine current location of 3 using address (for 1st operand).
- If the current location does not already exist, generate move (B, O).
- Update address of A (for 2nd operand).
- If the current value of B and () is null, exist.
- If they generate operator () A, 3 ADPR.
- Store the move instruction in memory.

#### PROGRAM:

```
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
void pm(); void
plus(); void divi();
int i,ch,j,l,addr=100;

   if (! str || ! *str) return str;
    for (p1 = str, p2 = str + strlen(str) - 1; p2 > p1; ++p1, --p2)
        *p1 ^= *p2;
       *p2 ^= *p1;
        *p1 ^= *p2;
    } return
